# Question

Determine if the system of equations

$$x + y = 5 \quad (1)$$

$$2x + 2y = 10 \quad (2)$$

is consistent or not. If consistent, obtain the solution graphically.

# Solution Outline

- 1 Formulate the given system of equations in matrix form.
- 2 Factorize the matrix as

$$\mathbf{A} = \mathbf{LU} \quad (3)$$

$$\mathbf{L} = \textit{Lowertriangular} \quad (4)$$

$$\mathbf{U} = \textit{Uppertriangular} \quad (5)$$

- 3 Solve the equation

$$\mathbf{LUx} = \mathbf{B} \quad (6)$$

$$\implies \mathbf{Ly} = \mathbf{B} \quad (7)$$

$$\mathbf{Ux} = \mathbf{y} \quad (8)$$

# Algorithm

Let **A** be an  $n \times n$  matrix. Initialize **L** to an  $n \times n$  Identity matrix.  
Initialize **U** to a zero matrix.

$$L = \begin{pmatrix} 1 & 0 & \cdots & 0 \\ 0 & 1 & \cdots & 0 \\ \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \cdots & 1 \end{pmatrix} \quad (9)$$

$$U = \begin{pmatrix} 0 & 0 & \cdots & 0 \\ 0 & 0 & \cdots & 0 \\ \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \cdots & 0 \end{pmatrix} \quad (10)$$

For each row  $i$  from 0 to  $n - 1$  :

① For each column  $j$  from  $i$  to  $n - 1$  :

$$U_{ij} = A_{ij} - \sum_{k=0}^{i-1} L_{ik} U_{kj} \quad (11)$$

② For each row  $j$  from  $i + 1$  to  $n - 1$  :

$$L_{ji} = \frac{1}{U_{ii}} \left( A_{ij} - \sum_{k=0}^{i-1} L_{jk} U_{ki} \right) \quad (12)$$

Repeat the above step for all  $i = 0, 1, \dots, n - 1$

After all the iterations

$$\mathbf{A} = \mathbf{LU} \quad (13)$$

# Solution

For the given question,

$$\mathbf{A} = \begin{pmatrix} 1 & 1 \\ 2 & 2 \end{pmatrix} \quad (14)$$

$$\mathbf{L} = \begin{pmatrix} 1 & 0 \\ 2 & 1 \end{pmatrix} \quad (15)$$

$$\mathbf{U} = \begin{pmatrix} 1 & 1 \\ 0 & 0 \end{pmatrix} \quad (16)$$

Using (7), we have

$$\begin{pmatrix} 1 & 0 \\ 2 & 1 \end{pmatrix} \begin{pmatrix} y_1 \\ y_2 \end{pmatrix} = \begin{pmatrix} 5 \\ 10 \end{pmatrix} \quad (17)$$

By the method of **Forward substitution**, we have

$$\begin{pmatrix} y_1 \\ y_2 \end{pmatrix} = \begin{pmatrix} 5 \\ 0 \end{pmatrix} \quad (18)$$

Similarly,

$$\begin{pmatrix} 1 & 1 \\ 0 & 0 \end{pmatrix} \begin{pmatrix} x_1 \\ x_2 \end{pmatrix} = \begin{pmatrix} 5 \\ 0 \end{pmatrix} \quad (19)$$

It can be seen that

$$x_1 + x_2 = 5 \quad (20)$$

$$0 = 0 \quad (21)$$

which is the same as the equation given in question, indicating that the given system of equations has infinite number of solutions, and hence, the system is consistent.

# Cramer's Rule

This question can also be solved by **Cramer's Rule**. According to this rule, the solution of the equation

$$\mathbf{Ax} = \mathbf{b} \quad (22)$$

is given by

$$\mathbf{x}_i = \frac{D_i}{|A|} \quad (23)$$

where,  $D_i$  is the discriminant of the matrix in which the  $i^{th}$  column of  $\mathbf{D}$  replaced by the vector  $\mathbf{b}$ .

If  $|A| = 0$ , then ( in case of a  $2 \times 2$  matrix )

- ① If  $D_1 = 0$  and  $D_2 = 0$ , then the system has infinitely many solutions.
- ② If  $D_i \neq 0$  for some  $i < 2$ , then the system has no solution.

# Solution - Cramer's Rule

For the given question,

$$\mathbf{A} = \begin{pmatrix} 1 & 1 \\ 2 & 2 \end{pmatrix} \quad (24)$$

$$\Rightarrow |A| = 0 \quad (25)$$

$$\mathbf{D}_1 = \begin{pmatrix} 1 & 5 \\ 2 & 10 \end{pmatrix} \quad (26)$$

$$\Rightarrow |D_1| = 0 \quad (27)$$

$$\mathbf{D}_2 = \begin{pmatrix} 1 & 5 \\ 2 & 10 \end{pmatrix} \quad (28)$$

$$\Rightarrow |D_1| = 0 \quad (29)$$

Hence, the system has infinitely many solutions, and is consistent.

Consider

$$\mathbf{A} = \mathbf{QR} \quad (30)$$

$$\mathbf{Q} - \textit{Orthonormal} \quad (31)$$

$$\mathbf{R} - \textit{Uppertriangular} \quad (32)$$

The equation (22) can be simplified to

$$\mathbf{QRx} = \mathbf{B} \quad (33)$$

$$\mathbf{Rx} = \mathbf{Q}^T \mathbf{B} \quad (34)$$

This can then be solved using **Back substitution**.

Using the **Gram-Schmidt orthogonalisation**, we have

$$\mathbf{A} = \begin{pmatrix} 1 & 1 \\ 2 & 2 \end{pmatrix} \quad (35)$$

$$= \begin{pmatrix} \frac{1}{\sqrt{5}} & 0 \\ \frac{2}{\sqrt{5}} & 0 \end{pmatrix} \begin{pmatrix} \sqrt{5} & \sqrt{5} \\ 0 & 0 \end{pmatrix} \quad (36)$$

$$\Rightarrow \begin{pmatrix} \sqrt{5} & \sqrt{5} \\ 0 & 0 \end{pmatrix} \begin{pmatrix} x \\ y \end{pmatrix} = \begin{pmatrix} \frac{1}{\sqrt{5}} & \frac{2}{\sqrt{5}} \\ 0 & 0 \end{pmatrix} \begin{pmatrix} 5 \\ 10 \end{pmatrix} \quad (37)$$

which again simplifies to (19) indicating that the given system is consistent with infinite number of solutions.
